

ASSIGNMENT – II

1, 2: - Create user table with email USERNAME ,ROLL_NO, PASSWORD and perform insert ,update and delete.

QUERY:

```
create table user(username varchar(255),email varchar(255), roll_no
varchar(255),password varchar(255));
insert into user
values('arun','arun@01','001','arun@01'),('jeeva','jeeva@gmail.com','002','jeeva@02'),
('aruna','aruna@gmail.com','008','aruna@08'),('dinesh','diasfh@gmail.com','024','Poio
y@24');
select * from user;
update user set email='angel@gmail.com' where roll_no='008';
insert into user values('dineshs','dineshs@gmail.com','025','Omfs@025');
delete user where roll_no='024';
select * from user;
```

The screenshot displays the IBM Db2 on Cloud web interface. The top section shows a browser window with the URL `bpe61bfd0365e9u4psdglite.db2.cloud.ibm.com`. The interface includes a sidebar with navigation options like 'Data objects', 'My script', and 'SQL'. The main area shows a SQL editor with the following script:

```

1 create table user(username varchar(255),email varchar(255), roll_no varchar(255),password varchar(255));
2 insert into user values('arun','arun@01','001','jeeva','jeeva@gmail.com','002','jeeva@02'),('aruna','aruna@03');
3 select * from user;
4 update user set email='angel@gmail.com' where roll_no='008';
5 insert into user values('dineshs','dineshs@gmail.com','025','Omfs@025');
6 delete user where roll_no='024';
7 select * from user;
8

```

Below the SQL editor, there is a 'History' tab. The bottom section of the interface shows a table view for the 'PQW81844.USER' table. The table has four columns: 'USERNAME', 'EMAIL', 'ROLL_NO', and 'PASSWORD'. The data is as follows:

USERNAME	EMAIL	ROLL_NO	PASSWORD
arun	arun@01	001	arun@01
arun	arun@01	001	arun@01
aruna	angel@gmail.com	008	aruna@08
aruna	angel@gmail.com	008	aruna@08
dineshs	dineshs@gmail.com	025	Omfs@025
jeeva	jeeva@gmail.com	002	jeeva@02
jeepva	jeepva@gmail.com	002	jeepva@02

3. Connect python to db2

```
from flask import Flask, render_template, request, redirect, url_for, session
```

```

import ibm_db

    print("Connection Successful!!!")

except Exception as exception:
    print("unable to connect ", exception)

```

4) ACCESS LOGIN WITH CONNTING TO DATABASE

```

from flask import Flask, render_template, request, redirect, url_for, session
